

Parts of the Architectural Thinking Framework

The Architectural Thinking Framework® consists of four parts:

- [Lightweight Architectural Model](#)
- [Small set of Architectural Maps on enterprise- and solution level](#)
- [Architecture Principles](#)
- [Integration Artefacts](#), i.e. interfaces to relevant processes of the enterprise.

The Architectural Thinking Framework® defines three levels of architecture: (i) enterprise, (ii) top-level capability and (iii) solution.

For each part, Architectural Thinking provides *how-tos* that have been proven in practice and gives detailed instructions on how to model the corresponding artifacts.
